

Product Approval and Certification for Heat Generators

According to European Union rules, heat generators must have a CE marking when they are launched on the market. TÜV Rheinland helps manufacturers of biogenic and fossil heating devices comply with the European Directives and EU regulations.

By involving our experts at an early stage, you can remain competitive in a heavily competitive market. We know which standards are required and where. Certification simplifies market access and offers additional advantages. We also offer services that complement certification, such as compliance with the Ecodesign Directive and the Gas Appliance Regulation.

The TÜV Rheinland Test Centre for Energy Appliances is accredited and registered with the European Commission

as a Notified Body. As members of international specialist committees our experts are involved in shaping the standards and thereby the industry.

OUR SERVICES

- Internationally valid certificates and test reports, e.g. Flamme Verte certification
- EC type testing
- Project support
- Production monitoring and testing in line with the Pressure Equipment and Gas Appliance Regulation as well as the Construction Product Regulation
- Identification of tapping profiles and standby-losses for water heaters
- Testing according to European Heat Pump Association (EHPA) test regulations and Heat Pump KEYMARK
